Saheb Motiani

Distributed systems, streaming and ML infrastructure

London, UK · saheb210692@gmail.com · Research · GitHub · LinkedIn

Senior software engineer with 10+ years building production systems at Meta, Babylon Health and Disney Streaming. On an ML-focused career break since 2025, building LLM and RL training systems.

Professional Experience

Senior Software Engineer – Meta Jan 2024 – May 2025

- Built notifications prompting non-admin users at high-value advertisers to appeal mistaken ad-account enforcements, unblocking **$6.6M/year** in revenue.
- Ran experiments showing broader appeal notifications increased harm, as bad actors exploited gaps in the appeal process. Worked with data scientists and the abuse-prevention team to limit the rollout to high-value advertisers.
- Fixed a multi-recipient concurrency bug, reducing notification failure rates by **70%** for Facebook Pages, **30%** for ad accounts and **8%** for businesses; found the platform logging false-positive delivery successes.

Senior Software Engineer – Babylon Health Aug 2019 – Oct 2023

- Designed a deployment approach using Python stream-processing functions (Faust) for ML risk-prediction models, with outputs consumed by clinical portals and patient-outreach tools.
- Built reusable Flink patterns for ETL, feature engineering and stream processing; the data platform team began rolling out Flink internally.
- Led an **8–10-person cross-functional team** delivering a health-scoring product with Applied Scientists; developed Scala services for health-assessment and symptom-checker chatbot workflows.

Senior Software Engineer – Disney Streaming Aug 2017 – Jun 2019

- Designed distributed services to validate incoming media before transcoding and packaging, connecting on-premises infrastructure and AWS through asynchronous Kafka communication.

Earlier Experience

Software Engineer – Cake Solutions (acquired by Disney) · Nov 2016 – Aug 2017
Built media-acquisition automation for live ESPN+ and MLB.TV production.

Senior Associate – Morgan Stanley · Aug 2014 – Jul 2016

Independent Engineering

ML-focused career break · Aug 2025 – present

- **TasteBento:** Develop and maintain a live social-discovery app based on users' taste profiles (Next.js, Postgres/Supabase, Cloudflare), with parallel LLM generation, automated checks and reranking; implemented query parallelization and session-revocation checks for mutations.
- **Orbit Wars:** Built a GPU-vectorized PyTorch simulator and RL training system (~4.1k end-to-end steps/s on RTX PRO 6000); caught an evaluator counting opponent crashes as wins and added safeguards.
- **OLMo GRPO:** Built an RL fine-tuning trainer with PyTorch, LoRA and vLLM batched generation.

Technical Skills

Production systems: Python, Scala, Java, SQL, Kafka, Flink, AWS, GCP, Kubernetes; distributed services, streaming pipelines and model deployment.

ML systems: PyTorch, Transformers, PEFT/LoRA, vLLM; training and evaluation.

Education

B.Tech., ICT · Dhirubhai Ambani University (formerly DA-IICT) · 2014
